

Finding the right size for yourself or someone else can be as easy as 1 - 2 - 3 if you know how! Please find these very simple guidelines to getting the right size - every time! Follow the instructions below and you will be well on the way to ordering your new skates and getting the right size!

NEVER RELY ON WHAT SIZE YOUR SHOES ARE!

The biggest mistake most people make when they are purchasing skates is thinking that all sizes are universal. They are most certainly not! Variations in sizes between brands and styles can be dramatic. So, never take what your current shoe size as gospel! The best way is to focus on facts!

MEASURE YOUR FEET CORRECTLY.

First, get yourself a simple household ruler, then find yourself a nice clean piece of paper and a pen or pencil.

The next step may tickle a bit. Place your foot on the paper and with a pen or pencil, trace around the foot. Be sure to keep the pen/pencil straight up & down the whole way round your foot.

OPTION 1

Remove your foot and take the ruler. Draw a straight line beside the foot parallel with the edge of the paper. Make sure the line is longer than your foot.

Next, draw another line across the page at the highest & lowest point of your feet. Make sure that this line intersects the first line that you drew.

OPTION 2

For people "on the go" or wishing to purchase skates as a surprise gift, take an insole out of a shoe that you know already fits. Simply measure the length of the insole the same way you measure your foot in **OPTION 1**. Remember, the length of this insole should account for some wiggle room - please check.

Next, measure the distance between where the first and second lines intersect. This will give you the best measurement of the length of your foot. Flip the page over and do the same thing for your other foot. Don't be surprised if there is a slight difference in the size of your feet. Always size according to your bigger foot.

3

COMPARE TO THE SIZE CHART OF YOUR PREFERRED SKATE.

Each different model of our skates may vary slightly in size. This is often due to the differences in styles and designs. It is important that you compare your measurement to the size chart of the skate that you wish to purchase. Once you have your measurement and then your preferred size chart, you are almost there!

DON'T FORGET ABOUT YOUR "WIGGLE ROOM"!

This *wiggle room will vary with personal preference. But, for the purposes of this guide, we will give you our recommendation which comes from years of experience in fitting skates! We suggest that you allow at least half of a centimetre to a full centimetre. That is 5 - 10mm extra as a minimum. This bit of room is based on a few of things:

A. That your feet have finished growing.

B. That you do not experience swelling that may lead to your feet becoming uncomfortable after long periods of use.

NARROW STANDARD WIDE

C. That your feet are not excessively broad (wide). We can assist you in getting the correct size if you have broad (wide) feet.

*WIGGLE ROOM = SPACE IN FRONT OF TOE

UNUSUAL FEET?

If your feet do not fall into the above categories and you are unsure as to how much extra room you should allow, please feel free to drop us an email with your measurements and your concerns along with the model that you wish to purchase. We will work with you to get the right size - no problem!

There you go! Simple as 1 - 2 - 3!
